

Green Compass Business PC

Picture for illustration only, actual appearance may vary.

- **Low Energy Consumption**
- **Small Footprint**
- **Business Performance**
- **Windows Vista/7 Ready**

Infotology's Green Compass Business PC is small, more of a desk corner than a desk top. It also has very small power consumption; at an average of 35w, it consumes at least 70% less electricity in comparison with standard pc systems, which means money saved on your electricity bill and a reduction in your organisation's carbon footprint, without any loss of computing capacity.

With its 1.6 GHz dual core Intel Atom processor, 2GB DDR2 ram, a 250 GB 2.5in HDD, DVD+-RW, Gigabit LAN, it provides all the performance you need to run the latest Windows Vista compatible business applications, whether as a standalone PC, or as a workstation on a Windows Server 2003 or Windows Server 2008 network. We can also supply systems with Ubuntu Linux OS pre-installed.

Save money; save the planet and save desk space; the Green Compass Business PC points the way to a brighter, more prosperous future.

Green Compass Business Server

Picture for illustration only, actual appearance may vary.

- **Low Energy Consumption**
- **Mini Tower or rackmount**
- **SATA 0, 1, 10, 5 RAID**
- **2.5" HDDs**

Infotology's Green Compass Servers are designed for continuous, reliable, performance at the heart of your business. Very low power consumption means money saved on your electricity bill and a reduction in your organisation's carbon footprint, without any loss of computing capacity. It also means that our servers can run longer on batteries in the event of a power outage, allowing you to continue working when other systems would have shut down.

Both our SME Server and Enterprise servers use high performance, energy efficient processors, SATA II or SAS HDDs, and Gigabit LAN. They provide all the performance you need to run Windows Server 2008 or Ubuntu Linux Server as your network domain controller, mail server, web server or application server.

Reliable, low cost to run and environmentally friendly, each Green Compass Business Server will reduce the amount of CO₂ you produce by about half a tonne per year compared to a standard server. Cutting total demand for electricity by deploying more energy efficient equipment, makes a target of 30% generated by renewable resources much more achievable.

SME Server Specification

Intel dual core processor; up to 8GB memory; 4 x 250 GB 2.5" HDDs, integrated graphics with 2D/3D and Video acceleration; dual Gigabit Ethernet Ports and slimline DVD+-RW drive, mini-box or 2u rackmount

Enterprise Server Specification

Intel Xeon quad core processors; up to 96GB memory; SATA II or SAS hot swap HDDs; dual Gigabit Ethernet Ports; dual redundant power supplies; 2u or 4u rackmount chassis
